FOR BROODMARE NUTRITION:

- ❖ Provide a constant supply of fresh clean water.
- ❖ Feed a high end forage such as alfalfa or an alfalfa mix hay.
- ❖ Mare needs to consume 3% of her bodyweight per day in forage.
 - Approx 12 lbs for a 1000 lb horse
- ❖ Usually a high protein feed (12% or higher) will supply enough energy for lactation.
 - Some mares may also need a high fat feed or feed additive
- ❖ Each feed will be different in amount for each lactating mare

Please consult your veterinarian before making any dietary changes.
